

What is the NHRA?

— 2 3 0 — + a  
+ o  
+ d  
3 0 — + 2 — c — s

Courtney

Today's learning objective:

By the end of class, I will be able to find the equations of tangent lines at any point on the original curve.

Today's language objective:

I will verbalize the following vocabulary with my peer group during class.

Derivative; Tangent; Gradient  
Slope-intercept; Point-slope

Let's build an NHRA function:

$(0,0)$   
 $(4,320)$   
 $(8,0)$

$f(x) = a(x-h)^2 + K$   
(vertex form)

$f(x) = a(x-4)^2 + 320$

$$f(x) = -20(x-4)^2 + 320$$

$$0 = a(0-4)^2 + 320$$

$$-320 = a(-4)^2$$

$$\frac{-320}{16} = \frac{a \cdot 16}{16}$$

$$-20 = a$$

$$f(x) = -20(x-4)^2 + 320$$

$$f'(x) = 2(-20)(x-4)^1$$

$$f'(x) = -40x + 160$$

$$\begin{aligned} f'(6) &= -40(6) + 160 \\ &= -240 + 160 \end{aligned}$$

$$f'(6) = -80$$

$$\begin{aligned} f(6) &= -20(6-4)^2 + 320 \\ &= -80 + 320 \end{aligned}$$

$$(x-4)(x-4)$$

$$(x^2 - 8x + 16)$$

$$\begin{aligned} -20x^2 + 160x - 320 \\ + 320 \end{aligned}$$

Point  
 $(6, 240)$

$$y = mx + b$$

$$\begin{matrix} (6, 240) \\ x \quad y \end{matrix}$$

$$m = -80$$

$$240 = -80(6) + b$$

$$240 = -480 + b$$

$$720 = b$$

$$y = -80x + 720$$

Which tangent line should we analyze?

$$f(x) = -20(x-4)^2 + 320 \quad x=2$$

$$f'(2) = -40(2) + 160$$

$$f'(2) = 80$$

$$240 = \underbrace{80(2)}_{160} + b$$

$$f(2) = 240$$

$$240 = 160 + b$$

$$\boxed{\frac{-160}{80} = b}$$

$$y = \underline{80x} + 80$$

What is the equation of the tangent line?

$$\ln x = \frac{1}{x}$$

$$f(s) = \ln 6s$$

$$f'(s) = \frac{1}{6s} \cdot 6$$
$$= \frac{1}{s} = s^{-1}$$

velocity

$$ms^{-1} = m/s$$

acceleration

$$ms^{-2} = m/s^2$$

$$f''(s) = -\frac{1}{s^2}$$

$$y = 40x + b$$

$$300 = 40(37) + b$$

$$180 = b$$

$$y = 40x + 180$$

$$y = 320$$

$$x = 4$$

max

Remember Ms. Fowler's roller coaster?

What's the rate of change at the start of the roller coaster?
