

Stress is trigonometric.

Graph $f(x) = \sin x$ in Y1 on your calculator

*In "Radian" mode

*In "Degree" mode

$$x_{\min} = -360$$

$$x_{\max} = 360$$

Make an inference about radian and degree mode when graphing trigonometric functions.

The Unit Circle

Today's learning objective:

By the end of class, I will be able to transform trigonometric functions.

Today's language objective:

I will use the following terms when graphing my trigonometric functions.

Amplitude; Period; Unit Circle; Radians;
Sinusoidal

Amplitude: is the magnitude of the oscillation of a sinusoidal function

Period: the distance required for a sinusoidal function to complete one cycle

Graph $f(x) = \underline{\sin 2x}$

and

$-\pi, \pi$ $\frac{\pi}{4}$

Graph $g(x) = \underline{2 \cos x}$

on your graphing boards. Find amplitude & period

$$\sin 2x \quad A=1$$

$$P = \pi$$

x	y
$-\pi$	0
$-\frac{3\pi}{4}$	-1
$-\frac{\pi}{2}$	0
$-\frac{\pi}{4}$	1
0	0
$\frac{\pi}{4}$	-1
$\frac{\pi}{2}$	0
$\frac{3\pi}{4}$	1
π	0

$$2 \cos x$$

x	y
$-\pi$	-2
$-\frac{3\pi}{4}$	$-\sqrt{2}$
$-\frac{\pi}{2}$	0
$-\frac{\pi}{4}$	$\sqrt{2}$
0	2
$\frac{\pi}{4}$	$\sqrt{2}$
$\frac{\pi}{2}$	0
$\frac{3\pi}{4}$	$-\sqrt{2}$
π	-2

Graph $f(x) = 7 \cos\left(\frac{x}{2}\right) + 1$

$-4\pi \leq x \leq 4\pi$

π increments

$$7 \cos \frac{x}{2} + 1$$

x	y
-4π	8
-3π	1
-2π	-6
$-\pi$	1
0	8
π	1
2π	-6
3π	1
4π	8

Extrapolation: dangerous; fitting your model to points that exceeds your data set. Do not do this. Financial analysts attempt to extrapolate and *often* fail.

"Past performance is no indication of future performance." Luck doesn't change probability.

Interpolation --> :)
fitting your model to points within your data set. Feel free to do this.
